

LOGAN GLOBAL GROWTH Q3 | 2021 REVIEW AND A LOOK AHEAD¹

And now for the hard part! The easy part of the recovery has passed and we will all need to address the harder to fix aspects of the recovery. We entered the third quarter with a positive outlook. The global economy recovering more rapidly than many expected, employment was improving, significant progress was being made with regard to COVID-19, and most businesses were reporting better than expected results and strong demand for their products. Unfortunately, as the quarter progressed, much of the positive momentum was lost to increasing uncertainty on almost all fronts. In Asia, the introduction of new guidelines in China about growth and corporate governance cast a cloud over a rapidly growing economy. The portfolio has little direct exposure to China but other Asian holdings lagged as investors assessed the implications of the changes. Other governments around the world started to act in less decisive and less clear ways than they had at the beginning of the COVID-19 shutdowns – giving consumers and

businesses a reason to wait and see what happens with spending, taxes, and regulation. During the last week of the quarter, the US Government came close to a shutdown as lawmakers could not agree on a path forward. Upticks in COVID-19 across the globe lead to small shutdowns that had a significant impact on already fragile supply chains which made it difficult for businesses to keep up with strong orders. In a period of relatively high unemployment, businesses found it hard to attract workers for all the open jobs. Despite all these issues, the year continues to be a positive one for the portfolio

Our team is expecting most of these challenges to resolve over the next few months. Corporate and personal balance sheets are in better shape than they have been in decades. The swift and significant actions taken by governments across the globe kept most business viable and the investments in technology over the past decade proved to be invaluable to letting

workers in many industries continue to work despite their offices not being open. The US, the largest weighting in the portfolio, is leading the global recovery due to having the most advanced technology, a more service-based economy, and one of the most effective responses to the health care challenges presented by COVID-19. The easy part of the recovery may be behind us as those workers who remain unemployed may have a challenging time finding positions that meet their skills.

The events of the past two years have, in our view, accelerated changes which have been taking place in the global economy. Technology is changing every industry and it is not common for business of all types to refer to themselves as “technology” companies. Retail is a very visible place to see the rapid change, though every industry is experiencing the change. Our team has been preparing for this change for many years. We look for every company in the portfolio to have unique products that they

¹Logan Global Growth Restricted results discussed herein should be read in conjunction with the attached performance and disclosures

can charge a premium for, be aggressive in the implementation of technology in their business and be adept at understanding the changes in their customers' needs. These characteristics were critical over the past year and will remain so.

We also take the time to not just look at the companies we invest in but also the customers the businesses sell to. This recovery, like many, is being led by those consumers who can adapt to change. Most recoveries are led by the consumer, with the more affluent consumers leading first and this cycle has been typical. The nature of the shutdowns and the ability for skilled workers to work from home created a large group of consumers whose income remained secure and whose daily expenses fell – creating a glut of savings and some of the strongest personal balance sheets in decades. Personal balance sheets were also helped by a rapid recovery in the equity markets and home prices. Many chose to invest in their homes and that investment created demand, and now some shortages, across the economy.

We believe the next phase of the recovery will be much more challenging as management skill will be critical to operating in a changed world. Businesses will need to develop a resilient supply chain to meet demand, be able to retain and attract team members that now have slightly different priorities and meet the demands of a much more tech savvy customer. Many employees

enjoy the flexibility of remote work that that change will impact many businesses as people change where they spend their time. Spending on services is recovering and the sure in spending on goods may moderate. Providing a solid customer experience will be key and will require flexibility.

We do expect profitability to improve for many businesses as the changes implemented over the past few years have boosted productivity. Though the improvement will not be spread evenly across all companies as some will find themselves left behind in a changed world if they don't make the investments necessary to compete. Shortages of labor and materials will increase costs and business without the ability to pass higher cost along or be more productive will suffer – we are constantly evaluating every company we invest in to make sure they can keep up.

As we enter the final quarter of the year, we do expect much of this uncertainty to resolve. Society will become more adept at living with the challenges presented by COVID-19, supply chains will eventually recover and while we expect costs to increase, some of the extreme spikes should level off much like what happened to the price of lumber during the summer. We are keeping a close eye on energy costs and other raw materials – we would not be surprised to see those costs remain high, but at some point, they should stop rising. Those higher costs will need to be compensated for through productivity and pricing.

We are also keeping an eye on business confidence which has fallen and is nowhere near the high levels reached in 2016-2019. Limited supply will keep prices high which means sales will be profitable – the fall off in confidence could slow investment for some business and that may slow improvements in unemployment. Inflation and a slowdown in investment may extend the leadership of the affluent consumer through the year as they are better able to adapt, and inflation has a less negative impact on their ability to spend. Our team remains constructive on the economy and earnings for the remainder of the year – we just expect the recovery to be a bit more selective than the past twelve months have been. We will continue to focus on investing in nimble forward-looking companies with nimble and forward-looking customers.

Logan Global Growth Composite contains fully discretionary global growth equity accounts \$100,000 or greater, measured against the FTSE World Index. You cannot invest directly in an index. The FTSE World Index is a market-capitalisation weighted index representing the performance of the large and mid cap stocks from the FTSE Global Equity Index Series and covers 90-95% of the investable market capitalisation. This benchmark is used for comparative purposes only and generally reflects the risk and investment style of the composite. The Sharpe Ratio is included to help investors understand the return of an investment compared to its risk. The ratio is the average return earned in excess of the risk-free rate (90 Day U.S. TBill) per unit of volatility or total risk.

The strategy invests in global securities with a market capitalization over \$1 billion at time of purchase. Turnover is low, typically under 35% and holdings range between 60 and 80 positions. Only accounts paying commission fees are included. The minimum account size for this composite is \$100,000.

Logan Capital Management, Inc. claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS standards. Logan Capital Management, Inc. has been independently verified for the periods April 1, 1994 through December 31, 2020. A copy of the verification report(s) is/are available upon request. A firm that claims compliance with the GIPS standards must establish policies and procedure for complying with all the applicable requirements of the GIPS standards. Verification provides assurance on whether the firm's policies and procedures related to composite and pooled fund maintenance, as well as the calculation, presentation, and distribution of performance, have been designed in compliance with the GIPS standards and have been implemented on a firm-wide basis. Verification does not provide assurance on the accuracy of any specific performance report.

GIPS® is a registered trademark of CFA Institute. CFA Institute does not endorse or promote this organization, nor does it warrant the accuracy or quality of the content contained herein.

Logan Capital Management, Inc. is a privately owned Pennsylvania-based investment adviser registered with the Securities and Exchange Commission under the Investment Advisers Act of 1940. Registration as an investment adviser does not imply a certain level of skill or training. The verbal and written communications of an investment adviser provide you with information you need to determine whether to hire or retain the adviser. The firm maintains a complete list and description of composites, which is available upon request.

Results are based on fully discretionary accounts under management, including those accounts no longer with the firm. Past performance is not indicative of future results. The U.S. Dollar is the currency used to express performance. Returns are presented gross and net of management fees and include the reinvestment of all income. Gross of fee returns, have, however, been reduced by all actual trading expenses. Net of fee returns are calculated net of actual investment management fees & actual trading expenses. The annual composite dispersion presented is an asset-weighted standard deviation calculated for the accounts in the composite the entire year. Additional information regarding the policies for valuing investments, calculating performance, and preparing GIPS Reports are available upon request.

The investment management fee schedule for non-wrap accounts is as follows: 75 basis points on the first \$25 million, 65 basis points on the next \$25 million and 50 basis points on the next \$50 million. Fees for accounts with over \$100 million in assets are negotiable. Minimum fee is \$37,500. Actual investment advisory fees incurred by clients may vary.

The Logan Global Growth Composite was created April 30, 2015. On 03/31/20, the benchmark for the Logan Global Growth Composite was reviewed and replaced to provide greater transparency and accuracy into the holdings. As a result, the composite benchmark was changed from the MSCI World-Net Index to the FTSE World Index.
