Logan Value (LV) identifies large-cap stocks with strong fundamentals that have relatively high dividend yields and are undervalued relative to peers. The portfolio maintains a dividend yield relatively higher than the yield on the Russell 1000 Value index, and the portfolio's defensive characteristics help preserve wealth in times of market stress.

BENCHMARK Russell 1000 Value

INVESTMENT STYLE A value-oriented diversified portfolio of 35-45 large cap financially strong companies • Employs a disciplined, proprietary screening process to identify large companies (minimum >\$20B at purchase) with relatively attractive valuation metrics, consistent cash flows, and robust balance sheets • Dividend yield is the primary, but not exclusive, valuation tool

PERFORMANCE HIGHLIGHTS Solid downside protection from balance sheet strength and high dividend yield help support stock price • Low annual turnover and high active share at 76%

PORTFOLIO MANAGEMENT

Rich Buchwald, CFA, Bill Fitzpatrick, CFA, and Dan Gruemmer, CFA have over a 26-year average of investment tenure. Rich has co-managed the Logan Value portfolio since inception, Bill has co-managed Logan Value portfolio since 2019, and Dan has co-managed Logan Value portfolio since 2022.

Reference performance disclosure

Harmonic mean is a type of average that is calculated by dividing the number of values in a data series by the sum of the reciprocals (1/x_i) of each value in the data series. A harmonic mean is one of the three Pythagorean means (the other two are arithmetic mean and geometric mean). The harmonic mean always shows the lowest value among the Pythagorean means. The harmonic mean is often used to calculate the average of the ratios or rates. It is the most appropriate measure for ratios and rates because it equalizes the weights of each data point. For instance, the arithmetic mean places a high weight on large data points, while the geometric mean gives a lower weight to the smaller data points. In finance, the harmonic mean is used to determine the average for financial multiples such as the price-to-earnings (P/E) ratio. The financial multiples should not be averaged using the arithmetic mean because it is biased toward larger values. One of the most common problems in finance that uses the harmonic mean is the calculation of the ratio of a portfolio that consists of several securities.

N.M. - Information is not statistically meaningful due to an insufficient number of portfolios in the composite for the entire year.

Logan Value Composite contains fully discretionary large cap value equity accounts, measured against the Russell 1000 Value Index. You cannot invest directly in an index. The Russell 1000 Value Index is an unmanaged index that measures the performance of those Russell 1000 Index companies with lower price-to-book ratios and lower forecasted growth rates. The benchmark selected includes the reinvestment of dividends and income, but does not reflect fees, brokerage commissions, withholding taxes, or other expenses of investing. This benchmark is used for comparative purposes only and generally reflects the risk and investment style of the composite. The Sharpe Ratio is included to help investors understand the return of an investment compared to its risk. The ratio is the average return earned in excess of the risk-free rate (90 Day U.S. TBill) per unit of volatility or total risk.

The strategy invests in 35-45 large cap stocks with strong balance sheets and strong cash flows, and which typically have relatively high dividend yields. ADR's may be included in the portfolio (generally less than 10%). Turnover is typically 25 - 50% annually. Only accounts paying commission fees are included. Prior to January 1, 2012, the composite included both wrap and commission accounts. No minimum account size for this composite.

Logan Capital Management, Inc. claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS standards. Logan Capital Management, Inc. has been independently verified for the periods April 1, 1994 through December 31, 2021. A copy of the verification report(s) is/are available upon request. A firm that claims compliance with the GIPS standards must establish policies and procedure for complying with all the applicable requirements of the GIPS standards. Verification provides assurance on whether the firm's policies and procedures related to composite and pooled fund maintenance, as well as the calculation, presentation, and distribution of performance, have been designed in compliance with the GIPS standards and have been implemented on a firm-wide basis. Verification does not provide assurance on the accuracy of any specific performance report.

GIPS® is a registered trademark of CFA Institute. CFA Institute does not endorse or promote this organization, nor does it warrant the accuracy or quality of the content contained herein.

Logan Capital Management, Inc. is a privately owned Pennsylvania-based investment adviser registered with the Securities and Exchange Commission under the Investment Advisers Act of 1940. Registration as an investment adviser does not imply a certain level of skill or training. The verbal and written communications of an investment adviser provide you with information you need to determine whether to hire or retain the adviser. The firm maintains a complete list and description of composites, which is available upon request.

Results are based on fully discretionary accounts under management, including those accounts no longer with the firm. Past performance is not indicative of future results. The U.S. Dollar is the currency used to express performance. Returns are presented gross and net of management fees and include the reinvestment of all income. Gross of fee returns, have, however, been reduced by all actual trading expenses. Net of fee returns are calculated net of actual investment management fees & actual trading expenses. Prior to 2020, the annual composite dispersion presented is an asset-weighted standard deviation calculated for the accounts in the composite the entire year. Equal-weighted dispersion is presented for 2021 and going forward. Additional information regarding the policies for valuing investments, calculating performance, and preparing GIPS Reports are available upon request.

The investment management fee schedule for non-wrap accounts is as follows: 65 basis points on the first \$25 million, 55 basis points on the next \$25 million, 45 basis points on the next \$25 million and 35 basis points on the next \$25 million. Fees for accounts with over \$100 million in assets are negotiable. Minimum fee is \$32,500. Actual investment advisory fees incurred by clients may vary.

The Logan Value Composite was created October 1, 2000. On 09/16/22, Logan Capital hired Managing Director Dan Gruemmer, CFA to assist in portfolio management of the Logan Value strategy.
