

LOGAN VALUE PORTFOLIOS: LOGAN VALUE (LV) Q1 | 2023 REVIEW¹

MARKET ENVIRONMENT

In the first quarter of 2023, we saw a fairly strong reversion of value's outperformance of growth in 2022. This was a headwind for Logan Value (LV), which finished the quarter behind its benchmark, the Russell 1000 Value index. However, LV remains far ahead of its benchmark (gross and net) over the time period beginning with Pfizer's announcement of its COVID-19 vaccine in November of 2020.

More broadly, while the first quarter of the year began with the spotlight shining on whether the future actions of the U.S. Federal Reserve Board would suffice to engineer a soft landing for the economy, the quarter ended instead with a focus on the fallout from the actions the Fed had already taken. The nearly 500 basis point increase since March of last year marks the most aggressive interest rate move since 1980, and the move has little precedent in history when considering the ultra-low level from which present-day rates have increased. The U.S. has now seen bank failures by the few banks

that found themselves with the most concentrated exposure to at-risk sectors and interest rate risk. Fortunately, more severe contagion risk within the U.S. financial system has likely been significantly reduced by the swift actions taken by policymakers. The Bank Term Funding Program was enacted to help assure that banks have ample liquidity to meet depositors' needs, which could also importantly serve to assuage the kinds of fears that can lead to a contagion chain-reaction. Even with the fatter-tail risks sharply reduced by these actions, however, we could see continued fits and starts within the U.S. and global financial systems. We believe the disruption caused by second- and third-order effects of the underlying sharp increase in interest rates will contribute to a flight to quality within equity markets, and the LV portfolio stands to benefit from this shift. One example can be seen in the tens of billions of dollars in deposits that were moved out of smaller banks and into the top 25 largest banks in the course of just one week in mid-March. Still, banking sector stocks were hit largely

en masse during the latter part of the quarter by spooked investors, which was a headwind to LV.

Also during the quarter, as the market became more focused on a potentially negative economic outlook, oil prices declined, which drove underperformance in the energy sector. This shift in sentiment also resulted in the assumption of lowered future interest rates, which led some market participants to bid up equities with longer duration and more speculative free cash flows (i.e. growth stocks). As we saw through 2021, waves of increased risk-taking and speculation can drive periods of favorability – or even irrational exuberance – in lower-quality, riskier assets, which is the polar opposite of LV's philosophy and investment style. LV will continue to stick to its process of investing in large, financially stable, quality companies that we believe will provide our investors with attractive risk-adjusted long-term returns through whatever shorter-term conditions the markets may bring.

¹LOGAN VALUE results discussed herein should be read in conjunction with the attached performance and disclosures

PORTFOLIO REVIEW

Of the sectors in which we hold positions, those detracting from LV's relative performance the most were financials, communication services, and information technology. Sectors contributing most to relative performance were energy, utilities, and consumer staples.

The largest detractor within the financials sector was one of our bank holdings. The company reported earnings for the fourth quarter that were largely in-line with expectations, however, the stock fell through mid-March largely in tandem with the S&P Regional Banking index amidst the Silicon Valley Bank and Signature Bank failures. We see our bank holding as being adequately funded, with even lower risk following policymakers' initiation of the Bank Term Funding Program. Further, at the stock's present valuation, a great deal of downside risk is being priced in should the U.S. economy slow considerably and temporarily pressure the company's earnings power. The stock trades at an exceptionally low P/E of 6.6x estimated earnings with a dividend yield of 6.0% as of March 31, 2023.

Our two holdings within the communication services sector held up well in the quarter, but the sector as a whole was a negative relative detractor due largely to our absence of a large social media company holding that has experienced heightened volatility in the past year, does not pay a dividend, and has historically been a more richly-valued

growth-oriented security. Both of our communication services holdings, however, trade at a forward P/E of less than 9x estimated earnings, and sport dividend yields of just under 6.0% as of March 31, 2023.

The largest detractor within the information technology sector was our networking technology holding. The company reported earnings and revenue for the fourth quarter that were largely in line with expectations, however management provided free cash flow guidance that was lower than expectations. We believe the overall risk/reward of the stock is very attractive at its current valuation, with free cash flow guidance amounting to a roughly 8.5% yield on a normalized basis, which provides plenty of coverage for its 5.0% dividend yield as of March 31, 2023.

The largest positive contributor within the energy sector was our UK-based oil and gas holding. The company delivered record quarterly earnings that handily beat expectations on much higher-than-expected revenues. Management continues to prioritize shareholder-friendly capital allocation, which included a 10% dividend hike and \$2.75 million share buyback authorization. Shares trade at an undemanding 6x forward earnings estimates and yield 3.8% as of March 31, 2023.

The portfolio's lone utility stock had an uneventful first quarter. The company reported adjusted earnings that were slightly

ahead of estimates and maintained guidance for the full year. Shares yielded 4.2% at quarter end and offer diversification benefits for the portfolio.

LV maintains a sizable position in consumer staples, as the sector offers an attractive opportunity set of stable, well-run companies with competitive dividend yields. The top performer in the quarter was the portfolio's snack and beverage company with a sizable international presence. The company continues to raise prices to offset inflationary pressures, and thus far volumes have held steady. Fourth quarter earnings beat estimates, and management has guided towards a healthy 5-7% revenue growth target for 2023.

PORTFOLIO OUTLOOK

While certain aspects of the U.S. economy are showing resilience, there are signs that some macroeconomic trouble may lie ahead. On one hand, the broader labor market and certain other macroeconomic indicators continue to show strength. On the other hand, trends in construction and bank lending suggest there could be some trouble ahead. Regardless of the unknowable scenario that plays out regarding U.S. and global GDP performance over the near-to-intermediate-term, we believe that investing in large, conservatively capitalized companies providing attractive dividend yields that are well-supported by free cash flow generation will serve investors very well over time.

Dramatic, broad-stroke style and sector moves in the equity markets often lead to significant detachment from a company's underlying fundamentals, which will continue to provide us the chance to own quality companies at attractive valuations. This can be seen directly in the Portfolio's aggregate valuation metrics, which as of March 31, 2023, offered a dividend yield of 3.5% and P/E ratio on the next twelve month's earnings of 14x (based on FactSet estimates). This compares favorably to the Russell 1000 Value index, which had a yield of 2.3% and a forward P/E ratio of 15.7x at quarter-end.

We thank you for your continued confidence and investment in Logan Value. As always, please call or email us if you have any questions.

Indices are unmanaged and investors cannot invest directly in an index. Unless otherwise noted, performance of indices does not account for any fees, commissions or other expenses that would be incurred. Returns do not include reinvested dividends.

The Russell 1000 Value Index measures the performance of the large-cap value segment of the US equity universe. It includes those Russell 1000 companies with relatively lower price-to-book ratios and lower sales per share historical growth (5 years). The Russell 1000 Value Index is constructed to provide a barometer for the large-cap value segment. The index is completely reconstituted annually to ensure new and growing equities are included and that the represented companies continue to reflect value characteristics.

S&P Select Industry Indices are designed to measure the performance of narrow GICS® sub-industries. The index comprises stocks in the S&P Total Market Index that are classified in the GICS regional banks sub-industry.

Diversification does not guarantee a profit or protect against a loss in a declining market. It is a method used to help manage investment risk.

Logan Value Composite contains fully discretionary large cap value equity accounts, measured against the Russell 1000 Value Index. You cannot invest directly in an index. The Russell 1000 Value Index measures the performance of the large-cap value segment of the US equity universe. It includes those Russell 1000 companies with relatively lower price-to-book ratios and lower sales per share historical growth (5 years). The Russell 1000 Value Index is constructed to provide a barometer for the large-cap value segment. The index is completely reconstituted annually to ensure new and growing equities are included and that the represented companies continue to reflect value characteristics. The benchmark selected includes the reinvestment of dividends and income, but does not reflect fees, brokerage commissions, withholding taxes, or other expenses of investing. This benchmark is used for comparative purposes only and generally reflects the risk and investment style of the composite. The Sharpe Ratio is included to help investors understand the return of an investment compared to its risk. The ratio is the average return earned in excess of the risk-free rate (90 Day U.S. TBill) per unit of volatility or total risk.

The strategy invests in 35-45 large cap stocks with strong balance sheets and strong cash flows, and which typically have relatively high dividend yields. ADR's may be included in the portfolio (generally less than 10%). Turnover is typically 25 - 50% annually. Only accounts paying commission fees are included. Prior to January 1, 2012, the composite included both wrap and commission accounts. No minimum account size for this composite.

Logan Capital Management, Inc. claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS standards. Logan Capital Management, Inc. has been independently verified for the periods April 1, 1994 through December 31, 2022. A copy of the verification report(s) is/are available upon request. A firm that claims compliance with the GIPS standards must establish policies and procedure for complying with all the applicable requirements of the GIPS standards. Verification provides assurance on whether the firm's policies and procedures related to composite and pooled fund maintenance, as well as the calculation, presentation, and distribution of performance, have been designed in compliance with the GIPS standards and have been implemented on a firm-wide basis. Verification does not provide assurance on the accuracy of any specific performance report.

Logan Capital Management, Inc. is a privately owned Pennsylvania-based investment adviser registered with the Securities and Exchange Commission under the Investment Advisers Act of 1940. Registration as an investment adviser does not imply a certain level of skill or training. The verbal and written communications of an investment adviser provide you with information you need to determine whether to hire or retain the adviser. The firm maintains a complete list and description of composites, which is available upon request.

Results are based on fully discretionary accounts under management, including those accounts no longer with the firm. Past performance is not indicative of future results. The U.S. Dollar is the currency used to express performance. Returns are presented gross and net of management fees and include the reinvestment of all income. Gross of fee returns, have, however, been reduced by all actual trading expenses. Net of fee returns are calculated net of actual investment management fees & actual trading expenses. Prior to 2020, the annual composite dispersion presented is an asset-weighted standard deviation calculated for the accounts in the composite the entire year. Equal-weighted dispersion is presented for 2021 and going forward. Additional information regarding the policies for valuing investments, calculating performance, and preparing GIPS Reports are available upon request.

The investment management fee schedule for non-wrap accounts is as follows: 65 basis points on the first \$25 million, 55 basis points on the next \$25 million, 45 basis points on the next \$25 million and 35 basis points on the next \$25 million. Fees for accounts with over \$100 million in assets are negotiable. Minimum fee is \$32,500. Actual investment advisory fees incurred by clients may vary.

The Logan Value Composite was created October 1, 2000. On 09/16/22, Logan Capital hired Managing Director Dan Gruemmer, CFA to assist in portfolio management of the Logan Value strategy. As of 03/31/23, Rich Buchwald, CFA assumed a new title as Senior Consultant (formerly Managing Director) for the Logan Value Strategy.
