

Logan Absolute Return

Logan Absolute Return (AR) is a short-duration strategy with the objective of outperforming short-term interest rates while preserving capital. When compared to cash, money markets, and CDs, the mandate offers higher returns with low risk levels

BENCHMARK Bloomberg 1-5 Year Government Credit

INVESTMENT STYLE A prudent way to increase yield over traditional money market funds, CDs, and other depository accounts without taking undue risks • Investments selected through a three-part analysis: top-down macroeconomic analysis, sector/industry and fundamental company analysis, and technical analysis to confirm security selection—leading to selection and investment in “secular” growth companies whose earnings are less affected by economic cycles

PERFORMANCE HIGHLIGHTS Investments represent a particularly attractive area of the yield curve that has historically offered consistent annual total rate of return and no annual period of negative returns • Investments are always investment grade with a maximum average duration of less than three years • Routinely meets or outperforms the benchmark

PORTFOLIO MANAGEMENT

Al Besse, Stephen Lee, and Dana Stewardson have over a 39-year average investment tenure. They are the founding principals of Logan Capital Management and have co-managed the Absolute Return portfolio since inception.

Indices are unmanaged and investors cannot invest directly in an index. Unless otherwise noted, performance of indices does not account for any fees, commissions or other expenses that would be incurred. Returns do not include reinvested dividends. The Bloomberg 1-5 Gov't/Credit Index is a broad-based benchmark that measures the non-securitized component of the Bloomberg U.S. Aggregate Index. It includes investment grade, U.S. dollar-denominated, fixed-rate Treasuries, government-related and corporate securities that have a remaining maturity of greater than or equal to one year and less than five years. Portfolio holdings are subject to change without notice. All recommendations are based upon our experience and may or may not have been profitable in the past, now or in the future. Active portfolio management, including market timing, can subject longer term investors to potentially higher fees and can have a negative effect on the long-term performance due to the transaction costs of the short-term trading. In addition, there may be potential tax consequences from these strategies. Active portfolio management and market timing may be unsuitable for some investors depending on their specific investment objectives and financial position. Active portfolio management does not guarantee a profit or protect against a loss in a declining market.
